April,

Sorry it has taken a while to get back with you. We are in at the end of construction season and I have not been able to pull off the personnel needed to address the issues.

There are however some things I would like to address.

One issue that has continued to come up was with the storing of top soil. The lime stone seam is literally on the surface of the pit. There is very little topsoil available to be reclaimed. We intend to reclaim all that is available.

Another question that I have been asked again by our managers is if it is possible to reclaim some of the areas that were previously disturbed and continue working under a small mine designation rather than moving to a large mine.

Thanks,

Wayne McCandless

Hi Wayne,

I wanted to follow up with you to find out the status of your proposed large mine permit. Our last review was issued on June 4, 2015 (see attached). Nielson was proposing to expand the 5-acre small mine permit to a 32-acre large mine permit. We have not received your response back addressing our remaining 20 comments. Do you still plan to pursue the large mine permit?

Let me know and thanks.

Regards,

April
